## Why choose TD Reman as your CVT partner?

TD Reman is an engineering company based out of South Florida, specializing in the remanufacturing and wholesale distribution of JATCO CVT transmissions. Our staff includes a highly seasoned team of CVT experts with more combined experience remanufacturing CVTs than anyone else in the industry. We literally wrote the book on CVT diagnostics and repair. At the foundation of our organization are three core tenets; unmatched reliability, quality and service support.

TD Reman engineers continuously innovate to increase reliability. We are able to provide high quality units by partnering with the industry's leading manufacturers using best-in-class components. Some of the components we use in each unit are:

- Toledo TransKit® overhaul kits
- Original equipment CVT belts
- Original equipment CVT chains
- Hi-Per Blue® pistons
- Exedy® friction modules
- SAP bushings
- New factory valve bodies with solenoids and wiring harnesses for CVT 7 and 8 platforms
- In house pump and valve body remanufacturing with Sonnax updates

## TD Reman's proprietary assembly processes

All remanufactured CVT units undergo a strict 4 step process: *Inspect, Replace, Remanufacture, and Test*. Part of our process includes new CVT torque converter, upgrading anaerobic sealant, weld-reinforcing reluctors, and upgrading primary pulley apply pistons.

### Inspect

Each unit is inspected to ensure pristine components are in excellent working condition. All sealing surfaces are polished and finished.

### Replace

High-quality components are used for each unit to ensure consistent reliability.

### Remanufacture

Dedicated team of highly trained technicians must achieve internal quality standards.

### Test

Each unit is tested at various critical areas for proper function. Electronic sensors and switches are tested for final inspection.

In most cases, our CVT units are ready to be installed without the need for Nissan dealer flash programming. In the event that your vehicle experiences an error code, you will be required to program it with your local Nissan dealer.

## TD Reman's industry-leading warranty

At TD Reman we stand behind each of our CVT units with our industry-leading warranty. Not only do we go beyond our competition— we go beyond the dealer! Dealer warranties often result in \$700 and more out-of-pocket expenses.
